

 Luesma & Vega

2019-V1.2
EN

A vertical strip on the left side of the page shows a close-up of several green leaves, likely from a plant like basil, with their veins clearly visible. The leaves are layered, creating a sense of depth and texture. The background is a soft, out-of-focus light green.

We design functional elements that help communicate and represent the chef's speech

Luesma & Vega is a design and production studio specialized in high gastronomy tableware, founded by Ester Luesma and Xavier Vega.

The studio is innovative in craft production techniques with glass. The slow design creation process allows each of the pieces that make up a series are unique but maintain formal coherence, presenting small variations responding to our philosophy.

The experience in the design of tableware was initiated in collaboration with Ferran Adrià, working side by side with the team El Bulli from 2004 until the closing in 2011.

Every year some of the pieces developed for renowned chefs are incorporated into the general catalog.

Haute cuisine restaurants

The Cellar of Can Roca, Quique Dacosta, Diverxo, Azurmendi, Arzak, Mugaritz and many others have entrusted us their ideas and projects.

"With its undeniable quality
and his tremendous creativity
we have opened many paths"

Albert Adrià

Ester Luesma and Xavier Vega began their journey as Luesma & Vega in 1991, introducing new glass techniques in Spain such as vitrofusion and advanced thermoforming.

Until 2010 the studio is dedicated to the production of objects and sculptures in glass, collaborating with decorators and designing commemorative works and awards for companies.

In 2004 they were visited by the El Bulli team and were invited to be part of the design group for the development of the tableware.

In the year 2010, due to the great interest of great chefs in this work, Luesma & Vega decided to specialize in the development and production of customized tableware for high gastronomy.

The studio carries out the collections for the restaurant Miramar de Paco Pérez since 2011, projects for El Celler de Can Roca as "el Somni" and the collection for the restaurant Koy Shunka by Hideki Matsuhisa that receives the international design award ESDI-CIDIC in 2012.

"Tableware modeled with the passion of two people who embody little dreams"

Paco Pérez

The tableware must respond to a functional briefing, they must be resistant to the use and the usual thermal processes, to industrial washing, solve the needs of the room equipment, stackable, comfortable and smart.

In the communicative aspect, the dishes are exclusive for each project, making each dining experience unique and different.

The personalized creation, side by side with the chef, allows us to obtain a tableware that accurately frames the work of the gastronomic creator.

The recent studies in gastrophysics made with some pieces at the University of Oxford demonstrate the influence on the perception of the flavors and a good evaluation of the experience, responding better to the expectations of haute cuisine clients.

System

Combinations

Our handmade production is designed to make small series with the possibility of varying shape and color without the economic costs of industrial processes.

For this we strive to develop modular systems and flexible production processes.

What we call system is the list of shapes that we offer (round plates, plates, bowls and bowls, rectangular and irregular shapes) in combination with the finishes of the series of our system. The result of such a combination is a catalog with many pieces and difficult to reflect in its entirety in this document.

Any of the forms can be made with the finishes, MUNA, BOTANICA, SATIN, VELVET and VITTA VINTAGE. And almost all forms can be made with the finishes IRISAT, MARTINA, ROTHKO and SUNA.

On the following pages you will find more information and examples of these series.

Reference

The reference system is built with several blocks that define the piece.

- 1 - The family or series (Muna, Satin, etc.)
- 2 - The shape and size (tray 15x30cm, bowl of 14cm, etc)
- 3 - Color and finish (white, Velvet, etc)
- 4 - Notes (decoration or other details)

Botánica, BO-

Nature is linked to our trajectory. We are inspired by their shapes, compositions and colors. In the walks around our surroundings and in trips we collect the leaves that create this collection.

With a careful process that we call fossilization we can print them permanently on the pieces. We have selected the most interesting fossilizations. The impression of real leaves in glass results in delicate, organic, oriental beauty and always unique illustrations.

Some of the leaves used, as in the kitchen, are seasonal or come from deciduous trees. So it is possible that at some time of the year there is an extra model or that some type of leaf cannot be made.

Special edition for restaurant Diverxo, David Muñoz

Irisat, IR-

The irisat series is characterized by its shiny and metallic surface:
It is a coating made with precious metals.
This type of iridescent surface can be found in some insects.

Warning

For the production of the irisat series we use a high-end glass of completely manual manufacturing. Sometimes this method of artisanal production can create small marks on the glass surface, produced when the roller passes through the surface of the hot glass. Some people may interpret these irregularities as defects. We do not recommend this series if you are looking for a perfect surface and dishes that do not need special care.

Irisat is not dishwasher safe, with high temperature washes and abrasive detergents it loses its shine, as is the case with dishes that have gold or precious metals.

We recommend system sizes up to 26cm in diameter, for larger measurements you should consult.

Martina, MA-

Martina is a pictorial tableware. With his strong character he intends to cause a great visual impact on the diner. For brave plating as a background or powerful frame.

This series is the result of our intentions, to investigate processes that allow each piece to be unique taking advantage of natural effects. Copper reduction is printed forever on the glass surface in a random and unique way.

Marina owes its name to Mars.

Mix, MX-

Mix was born from the intention of investigating processes that recycle glass and result in surprising and high quality pieces. We use selected glass with excellent qualities, which once crushed and sifted are melted at high temperature to obtain a new piece of compact and resistant glass.

The result is a burst of frozen color. These special pieces are characterized by very organic silhouettes, a certain thickness and aesthetics that evoke rose petals, seaweed, ice ...

Muna, MU-

Muna" comes from the mixture of two concepts: the surface of the moon and the egg shell. ("Muna" in finnish means egg)

Muna was one of the first series we designed for el Bulli in 2006, time in which we were part of the design team of El Bulli, together with Ferran Adrià and Albert Raurich. We were looking for something new, light and deep, elegant, sober, subtle but with character. Hence its texture and fineness, like the delicacy of the eggshell, with irregular edges such as handmade paper, one by one, with its small differences that make it exceptional and inimitable.

Muna is dishwasher safe, lightweight, repairable and resistant. This serie, like most of our pieces has the particularity that in case of chipped they can be repaired, remaining imperceptible
Muna is made in all shapes and sizes of our system and now also available in many colors.

Rothko, RT-

The artist Mark Rothko gives name to this series.

His intense, intimate and delicate canvases have always moved us. His compositions of nuanced colors, like abstract landscapes, communicate deep human emotions to us.

This is our little tribute to his visual poetry.

For this collection we use very high quality glass produced by hand.

They consist of two colors: one is opaque and has the function of canvas, the other is transparent and creates the veils of watercolors.

Each piece is a small and unique picture.

The delicate silky finish makes it impossible to resist touching them.

Satin, SA-

Satin is a minimalist tableware, the pure expression of our satin glass, the perfect background. It enhances the plating in an exceptional way, since the dishes do not interfere with the visual result, like a blank canvas.

We call these types of plating elements "silent" dishes, because they do not produce visual noise and yield the prominence to the recipe. Even some models are "out of focus" in sight.

Available in all shapes and sizes of the system, with pure blacks and whites, complex colors (for example: celedon, vanilla, pink, opaline) always velvety surface.

Satin is a series that allows customization with an elegant embossing with the desired design.

Suna, SU-

Suna comes from the sun.

The characteristic gold appearance of this series is the product of oxidation of a thin layer of pure silver in contact with the glass when melting.

This series was born from the investigations of the action of different types of metals by melting them with glass, one of the experiments for el Bulli.

The Suna bowl-cup is one of the iconic pieces of the latest seasons of Ferran Adrià and Juli Soler's restaurant, that we have been expanding over time.

Suna bowl-cup.

It is an original iconic piece of el Bulli. The original version has a layer of glass with the silver on the outer. With use, that layer is disappearing, leaving the glass dyed of silver yellow. Currently we have improved the series encapsulating the silver between two layers of glass, being totally protected and greater shock resistance. Still, there are restaurateurs who prefer the original being finer and more delicate. The suna bowl-cup has no base, can be used as is or support in another proposal.

Varpa, VA-

The Varpa series is inspired by petroglyph spiral engravings that can be found in archaeological remains of many ancient cultures.

The decoration is done by applying white enamel by hand with a brush on glass. Then the piece is baked at high temperature to fix the decoration permanently.

If the decoration is applied on the surface of the piece, we call it "simple". And if it is in between two layers of glass, producing small bubbles, thicker and a different quality, we call it "double."

Where there is no enamel line the piece is transparent, showing the color of the tablecloth or the bottom where it is used.

Varpa, VA-

Velvet, VE-

This series is characterized by a beautiful velvety surface, with metallic shines of different intensity according to the fusing temperatures.

Technically the velvet series is based on the satin pieces that are hot coated with the velvety finish. They are dishwasher safe pieces. The velvet coating is made of prime minerals. The coating can also be obtained over the entire surface or drawn by hand, which we call "script".

Its very interesting the effect that occurs when it contains transparent liquids. Enigmatic and elegant, the velvet tableware does not go unnoticed. In copper, gold, blue and metallic greens.

Vitta Vintage, VV-

Vitta vintage is the result of a project to reuse old printed glasses. Some of these glasses have been discontinued in the 60s and come from a limited stock.

They can be manufactured in most forms of the system.

It is one of our few series made of transparent glass. That transparency added to the texture of the glass and the color produces suggestive shadows on the tablecloth or the table.

Custom holes piece

Clots, CL-

New tasting formats need new supports.
Snacks with spherical shapes do not hold well on a flat plate.

The "clots" series helps to serve semi-spherical snacks, balls, finger-food and also other types of shapes, such as oysters.

Serie Shape Color

Clovas, MI-

This series is inspired by natural elements such as mollusk shells. It's about simulating or evoking to give a new meaning to the dish.

With this series we don't propose a copy of the element but a performance that becomes emotional.

Golf, GO-

Golf was the first piece designed for the Bulli in 2004.

It is an example of a minimalist plate: the minimum surface to serve snacks with spherical shape.

Golf is an example of a modular system and allows the possibility of many combinations.

There are Golf with holes of 2cm and 3cm.

Shapes:

2cm holes:

GO-A2x6- 12 holes 6,5x18cm

GO-A3x4- 12 holes 9x12cm

GO-A4x4- 16 holes 12x12cm

3cm holes:

GO-B2x3- 6 holes 11x16cm

GO-B2x4- 8 holes 11x21cm

GO-B2x5- 10 holes 11x25cm

GO-B2x10- 20 holes 11x50cm

GO-B3x3- 9 holes 16x16cm

GO-B4x4- 16 holes 21x21cm

Nenúfar, FU-F07-

Inspired by the natural forms of the waterlily Victoria Creuzana, the waterlily is a product created through research into advanced craft technical processes.

Delicate and nice, the waterlily brings sensibility and tenderness.

The red version won the Emerge Award of the Bullseye Gallery (USA) in the design category in 2012.

The restaurant El Celler de Can Roca asked us to produce in all four colours of Macallan whisky labels for his 2016 charity dinner.

Niu, NI-

Niu was born as a plate with no meaning, that does not remember anything known and so the diner has no noise in the dining experience.

Niu responds to the typology of dishes that we call nests and that have large edges and collected shapes that remind them.

The first Niu was designed for Mugaritz.

NI-C01-B62 Nido 15cm silver iridescent

Rocks, RC-

In the act of plating, sometimes the chef need large areas to express his creativity and stimulate the diner with a beautiful composition of textures, shapes and colors.

The plate becomes a surface to capture a landscape and an artistic composition.

Rocks bases are flat pieces that can contain different types of reliefs, proportions and textures to make a spectacular plating.

Skitx, Sk-

Skitx is a well-known piece, selected for the exhibition and book "Tapas, Spanish Design for food" and the Topchef Spain TV show.

At Skitx, fusing techniques come together to produce a form unique and changing. No two are the same, as an example of our philosophy.

Recently studies of gastrophysics have been conducted with this model and very interesting conclusions have been reached.

With lovers and detractors, Skitx does not leave indifferent ...

Skitx - Sk-

Wood, WO-

Wood is a warm and beautiful material.

We had worked with wood making sculptures and some occasional assignment for chefs, and finally we have incorporated the necessary tools for turning, forming and finishing with our philosophy: serial pieces and at the same time unique.

Generally the finish is oil, so to keep them in optimum condition we recommend to apply essential oil them once a week. They can also be varnished with ecological lasures and suitable for the hotel industry.

Wood, WO-

Turned by hand,
straight or frustoconical
shape:

WO-T01- 13/15cm

WO-T02 - 19/21cm

WO-T03 - 30/32cm

-Podium 14cm
-Brochette Latira
-Brochette Lacasa
-Brochette Banana

Woods:

For turned parts, always
noble and tropical woods,
check availability

For Brochette and other
pieces, melis or oak wood

WO-T03-ash wood 30 a 32 cm straight shape with essential oil treatment

Special podium
every piece is unique and different,
about 14cm x 14cm height

Custom

Custom possibilities:

- relief drawings and logos
- printed logos
- custom models

Presentation or brand plate, satiny series, with engraved logo of the restaurant Iluerna. Each piece has a different part and different sizes.

Plate for StreetXO London, alabaster effect glass, screenprinted logo in high temperature.

Plate with Ikibana leaf shape and logo Jason Tan enameled in high temperature.

Piece for HeART Ibiza with shiny engraved logo

Custom design, "Fragil" for restaurant Àbac, Jordi Cruz, Barcelona

Custom design, "Himalaya" for Gaggan Anad, Banckgog.

Custom piece for Enoteka, Paco Pérez, Barcelona

Custom plate for The Man Behind the Curtain
Michael O'Hare, Leeds, UK

Engraved plate for Spoonik, Barcelona

Engraved plate for Providence, Los Angeles, USA

Cutlery stand for Cañabota, Sevilla.

Brand plate for Rte. La Boscana

Custom plate for Michael O'Hare, Leeds, UK

Custom piece for Somni, Aithor Zabala, Los Angeles, USA

Washing and care instructions

All the pieces are made of glass and are suitable for washing machine at moderate temperatures (50-60 °).
 The Muna and Satin series can be washed at high temperatures and short cycles (90°C).
 Whites color pieces can be warming in salamander and oven better than black ones.
 The glass of greater thickness does not support very sudden changes of temperatures.
 The Ice Stone series can be frozen and served to the table without problems.

We recommend hand washing the following series:
 Spine, Ice Stone, Irisat, Mix and Suna.
 Some pieces require cardboard or foam separators to be stacked.
 (single-use cardboard plates work very well)

Most plates can be repaired from small descaled.

Certificates

All our pieces meet the requirements for use in contact with food
 and they are free of migrations of metals, hydrocarbons and chemicals harmful to health.
 Even those parts treated with our water-repellent coating.
 Intertek certified

Some clients who entrusted their projects to us:

Hotels and gastronomic restaurants around the world use our tableware.
 Design and production in Spain.
